EDUCATION Model Institute of Engineering and Technology Jammu, India **B.Tech. in Computer Science and Engineering** | CGPA: 8.8/10.0 Expected Graduation: July 2026

TECHNICAL SKILLS **Languages & Databases:** C++, Python, JavaScript, TypeScript, SQL, HCL (Terraform), PostgreSQL (Supabase), MySQL **Frameworks & Cloud:** React, Next.js, Node.js, REST APIs, Google Cloud Platform (Cloud Run, GKE, Vertex AI) **Tools & Methodologies:** Terraform, Docker, GitHub Actions, CI/CD, Git, Agile/Scrum, GCP Workload Identity Federation **Core Concepts:** NLP (Gemini API), Semantic Search, Time Series Forecasting (LSTM, ARIMA), Data Structures & Algorithms, Cybersecurity, Infrastructure as Code (IaC)

PROFESSIONAL EXPERIENCE

Software Intern | Straatix Partners Labs Pvt. Ltd. | Jan 2026 – Present

- Built and maintained dual frontend portals for HR professionals and candidates using React/Next.js, implementing dynamic features such as interactive interview scheduling tiles and optimizing the overall UI/UX to ensure a fluid, accessible navigation experience.
- Architected the initial backend infrastructure on Supabase, resolving complex authentication workflows including robust Single Sign-On (SSO) and secure email verification, while concurrently authoring scalable serverless TypeScript edge functions to power automated referral email pipelines.
- Led the full-scale cloud infrastructure migration directly to Google Cloud Platform (GCP), strategically orchestrating essential enterprise services like Cloud Run and Vertex AI to properly support, reliably deploy, and dynamically scale high-demand production machine learning pipelines.
- Designed and executed a production-ready Terraform implementation for GCP, meticulously automating the reliable provisioning of strict Role-Based Access Control (RBAC), custom IAM roles, robust system security policies, and critical real-time observability alerts.
- Built robust GitHub Actions deployment pipelines deeply integrated with GCP Workload Identity Federation to enable secure, keyless system deployments and execute rigorous automated testing. Simultaneously conducted comprehensive security and vulnerability audits across the scalable cloud infrastructure to ensure uncompromising data protection.

Vice Chairperson | CSI Student Chapter - MIET | 2025 – Present

- Spearheaded the rigorous organization and execution of advanced technical workshops, competitive hackathons, and industry-aligned Agile coding competitions for an active student body of over 200 participants. This initiative actively elevated the practical, hands-on software development skill sets of engineering cohorts across the entire university campus.

Vice Chairperson & Research Lead | ACM - MIET Chapter | 2023 – 2025

- Led technical seminars focused on artificial intelligence, applied cryptography, and scalable software architecture to actively educate, mentor, and inspire a dedicated cohort of 50+ fellow engineering students. This sustained leadership initiative fostered a lasting culture of technical excellence and collaborative peer research throughout the academic year.

Intern | MIET | July 2024 – August 2024

- Conducted an exhaustive empirical analysis of complex algorithmic efficiency within large-scale data processing environments to accurately identify and isolate critical system-level bottlenecks. Following this thorough investigative analysis, I optimized the existing C++ and Python codebases, resulting in a 30% reduction in processing latency and significant performance improvements.

PROJECTS

Straatix Talent Exchange | React/Next.js, Node.js, TypeScript, Supabase, GCP, Terraform, GitHub Actions | Jan 2026 – Present

- Developed a dual-portal web application meticulously designed to serve both HR professionals and job candidates with highly responsive interfaces. This robust platform features dynamic interview scheduling capabilities, real-time system notifications, and secure role-based dashboards that significantly enhance user engagement and streamline the overall recruitment lifecycle.
- Led the complex migration of the backend infrastructure to Google Cloud Platform (GCP) utilizing Terraform as Infrastructure as Code (IaC) to ensure reliable, automated resource provisioning. By strategically orchestrating GKE clusters, Cloud Run services, and Vertex AI pipelines, I established a scalable, production-grade architecture capable of supporting advanced machine learning workloads.
- Architected and implemented a secure, keyless Continuous Integration and Continuous Deployment (CI/CD) pipeline with comprehensive automated testing by deeply integrating GitHub Actions with GCP Workload Identity Federation. This modern, automated deployment strategy drastically reduced deployment risks and completely eliminated the reliance on long-lived credentials, massively strengthening the platform's overall security posture.

Spender – AI-Powered Personal Finance Manager | *MERN Stack, REST APIs, Gemini API, Python*

- Engineered a full-stack personal finance management platform actively utilizing the modern MERN stack to deliver a seamless, intuitive, and responsive user experience across all connected devices. Furthermore, I integrated the advanced Gemini API via robust REST endpoints to seamlessly power an NLP-driven conversational chatbot that provides users with real-time, personalized financial guidance.
- Implemented advanced LSTM and ARIMA time series machine learning models to create an accurate predictive expense forecasting feature deeply integrated directly within the application's central dashboard. This sophisticated machine learning implementation enables active users to engage in proactive, long-term financial planning by precisely anticipating future expenditure trends.

Mind Bridge – AI-Driven Student Mental Health Support System | *React, Node.js, Gemini API*

- Engineered a digital wellness platform explicitly designed to systematically support vulnerable higher education students by deeply integrating the Gemini API for real-time conversational sentiment analysis. This innovative, AI-driven technical approach provides immediate, empathetic conversational support to users actively navigating complex emotional challenges or academic stress.
- Implemented a secure, privacy-focused backend architecture working alongside robust data handling protocols to strictly protect user anonymity and meticulously comply with modern data safety standards at all times. These comprehensive security measures ensure uncompromising confidentiality for all highly sensitive user interactions, personal journal entries, and private psychological assessments.

CERTIFICATIONS & DISTINCTIONS

- **Director's Merit List Gold Medalist:** Officially recognized by university administration for demonstrating outstanding academic performance and maintaining exceptionally high grades across all core computer science subjects. This distinction highlights a consistent, unwavering commitment to scholarly excellence and mastery of complex engineering principles.
- **Google Cybersecurity Professional Certificate:** Proven to be proficient in deploying advanced enterprise network defense strategies, conducting rigorous digital forensics procedures, and executing proper incident response protocols. I possess the hands-on expertise to apply modern cryptographic security measures to strictly protect critical user data from external vulnerabilities.
- **Palo Alto Networks Cybersecurity Specialization:** Highly skilled in configuring advanced enterprise network security protocols, executing proactive cyber threat mitigation techniques, and deploying comprehensive endpoint protection software. I am fully capable of successfully managing complex enterprise-level firewall security configurations to ensure robust system defense.
- **Certified Specialist in AI and Secure Computing:** Officially credentialed by Coursera for demonstrating proficiency in developing cutting-edge modern artificial intelligence applications. This certification thoroughly validates my ability to deploy rigorous, uncompromising secure software coding practices specifically designed for stable production environments.
